

MailManager4Act

Updating Contact Opt-in permissions in the database

Once you have sent your Contacts an Opt-in request email, you can download their choices by clicking the menu MailManager4Act > Optin Management > Update Contact Permissions We recommend running this command at least once a week in order to update your database so that all Contact permissions are downloaded. For security reasons, these submissions will be removed from our server once they are downloaded on your database. The Email Permission field will be set to Accepted or Denied based on the Contact's choice. Moreover, a History record will also be generated which will record the Contact's choice.
